“Maxillary Hypoplasia: Periodontal, Restorative and Airway Implications”

Friday, March 25, 2022

Fairfax Marriott at Fair Oaks 11787 Lee Jackson Memorial Hwy, Fairfax, VA 22033

Registration: 8:00 a.m. - 8:30 a.m. Program: 8:30 a.m. - 4:00 p.m.

6 CE Credit Lecture Hours - Business Attire

Synopsis:

The upper jaw carries a unique anatomic position as part of nasal and oral cavities. It plays a critical role in mastication, breathing and speech. Maxillary deficiency epidemics are associated with different types of malocclusion and narrow nasal passages, compromising periodontal health and nasal breathing. In this presentation we will discuss the importance of recognizing the impact of not treating the “LITTLE MAXILLA” and the lifelong effects on oral and systemic health. We will discuss innovations in management of maxillary hypoplasia with maxillary skeletal expansion protocols for different ages.

Course Objectives:

- The link between gingival recession and airway health
Restorative needs in patients with OSA
Latest advances in the treatment of maxillary hypoplasia

Supporting Exhibitors:

Table with 2 columns of exhibitor names: BridgeWay Practice Transitions, Carestream Dental, Dandy, DDSmatch Transitions, First Citizens, Garfield Refining Co, Implant Direct, RK Tongue, ZimmerBiomet

PROGRAM REGISTRATION FORM – Friday, March 25, 2022 – Marianna Evans, DMD

All registrations are confirmed by email

Dentist Name(s): Staff Member(s): please use another sheet if needed

Phone: Fax Number: Registration Email:

Credit Card Number: Expiration Date: Verification Code:

Name on card: Billing zip code:

Please make check payable to: Northern Virginia Dental Society 4330 Evergreen Lane, Suite N, Annandale, VA 22003

Table with 4 columns: Dentist - NVDS Member (\$110.00), Member's Auxiliary/Office Staff (\$105.00 each), Late Fee (\$25.00), Dentist - VDA/ADA Member (\$255.00), Dentist - Non ADA Member (\$650.00)

Registration Fees are per person and include breakfast and lunch TOTAL \$

Reservations must be received in writing by close of business Friday, March 18, 2022. Registrations submitted after 3/18/22 may not be accepted. Cancellations for this live event must be received in writing 2 days prior to the program. No refunds are made for cancellations made beyond this time.

About Our Presenter:

Dr. Marianna Evans is a full-time practicing orthodontist, periodontist and dental implant surgeon. She is a diplomate of the American Board of Periodontology and American Board of Orthodontics. Her interdisciplinary training and years of clinical experience allow her to see the interconnectivity of gum disease, malocclusion and skeletal function in a way few specialists can. Dr. Evans was also a Clinical Associate at The University of Pennsylvania Department of Orthodontics from 2010-2016 and a Consulting Scholar at The University of Pennsylvania Museum of Archaeology and Anthropology from 2016-2019 where she conducted research on jaw development in humans of the pre-industrial era. She also developed several orthopedic protocols and plastic surgical techniques within her specialties, frequently lectures on orthodontics, periodontics and dental implants both within the United States and around the world.

Locally, Dr. Evans is founder of the OrthoPerio Institute, an advanced education study club that provides courses on developments in dentistry to both clinicians and their staff. Courses are given on all surgical aspects of periodontics, implant dentistry and orthodontics. Unique to the Institute, courses include case study presentations with special emphasis on clinical treatment planning.

The focus of her treatment approach is to create harmony between facial beauty and healthy dentition. Her experience shows that the right diagnoses and treatment of malocclusion in young patients can eliminate the need for surgical and restorative intervention in later years, and even the extraction of teeth. Minimally invasive periodontal plastic surgery is the way of the future and Dr. Evans is expert in bone and cosmetic gum grafting. She also specializes in implant therapy, orthopedic palatal expansion in children and adults, orthodontics for adults and children, diagnosis and management of jaw deficiencies in patients with sleep apnea/SDB, congenitally missing and impacted teeth as well as TMD treatment.
